OVERVIEW

A double fall arrest lanyard is designed to suit you who need to move when you work at heights. With double hooks you always have a hook anchored when you move with the other hook. This is to provide the optimum security on, for example, scaffolding, mobile platforms or industries.

Fusion Twin-Flex is manufactured as a flexible tube with internal elasticity, which allows you to stretch the line to a maximum length of 1.8 meters. At the beginning of the rope there is an external absorber mounted which is released in case of a fall. Unlike Energy Twin-Flex this fall arrest lanyard is ANSI certified and are approved for a user weight up to 140 kg.
