

AT 191

Anchor line without connectors

EN 795/B

Connecting lanyard AT 191 is a component of personal fall protection equipment. The anchor point should be used as a portable temporary anchor device type B, enabling connection of connecting and absorbing device to a structural anchor point. Connecting lanyard is formed by stainless steel cable, 8mm dia and 0.6 to 10m long, fitted with loops of various diameters at both ends, enabling for looping without using any additional connectors.
